

APCUG Presents

Sliding Over From Windows to Linux Made Easy

September 21, 2022

Transition Key

- Programs available to Windows users
- Common to both Windows and Linux
- Makes the move from Windows to Linux very smooth

Internet: Browsers

- Firefox*, Brave
- Chromium, Chrome
- Browser extensions

Internet: Search Engines

- DuckDuckGo
- Google
- Bing

Internet: Password Security

- Bitwarden
- LastPass
- Roboform

Internet: Storage

- Dropbox
- Google Drive
- One Drive
- pCloud

Communication

- **Thunderbird** (client based mail)
- **Gmail/OutlookMail** (web based mail)
- **Zoom, Jitsi, Skype**

Productivity

- LibreOffice*
- Google Docs
- Office Online

Audio/Video

- VLC*

The Results

- Very comfortable with the software that I was using
- Very pleased to learn that the new operating system had the same software

TEST DRIVING LINUX

Try Linux on your own computer using a bootable thumb drive containing Linux

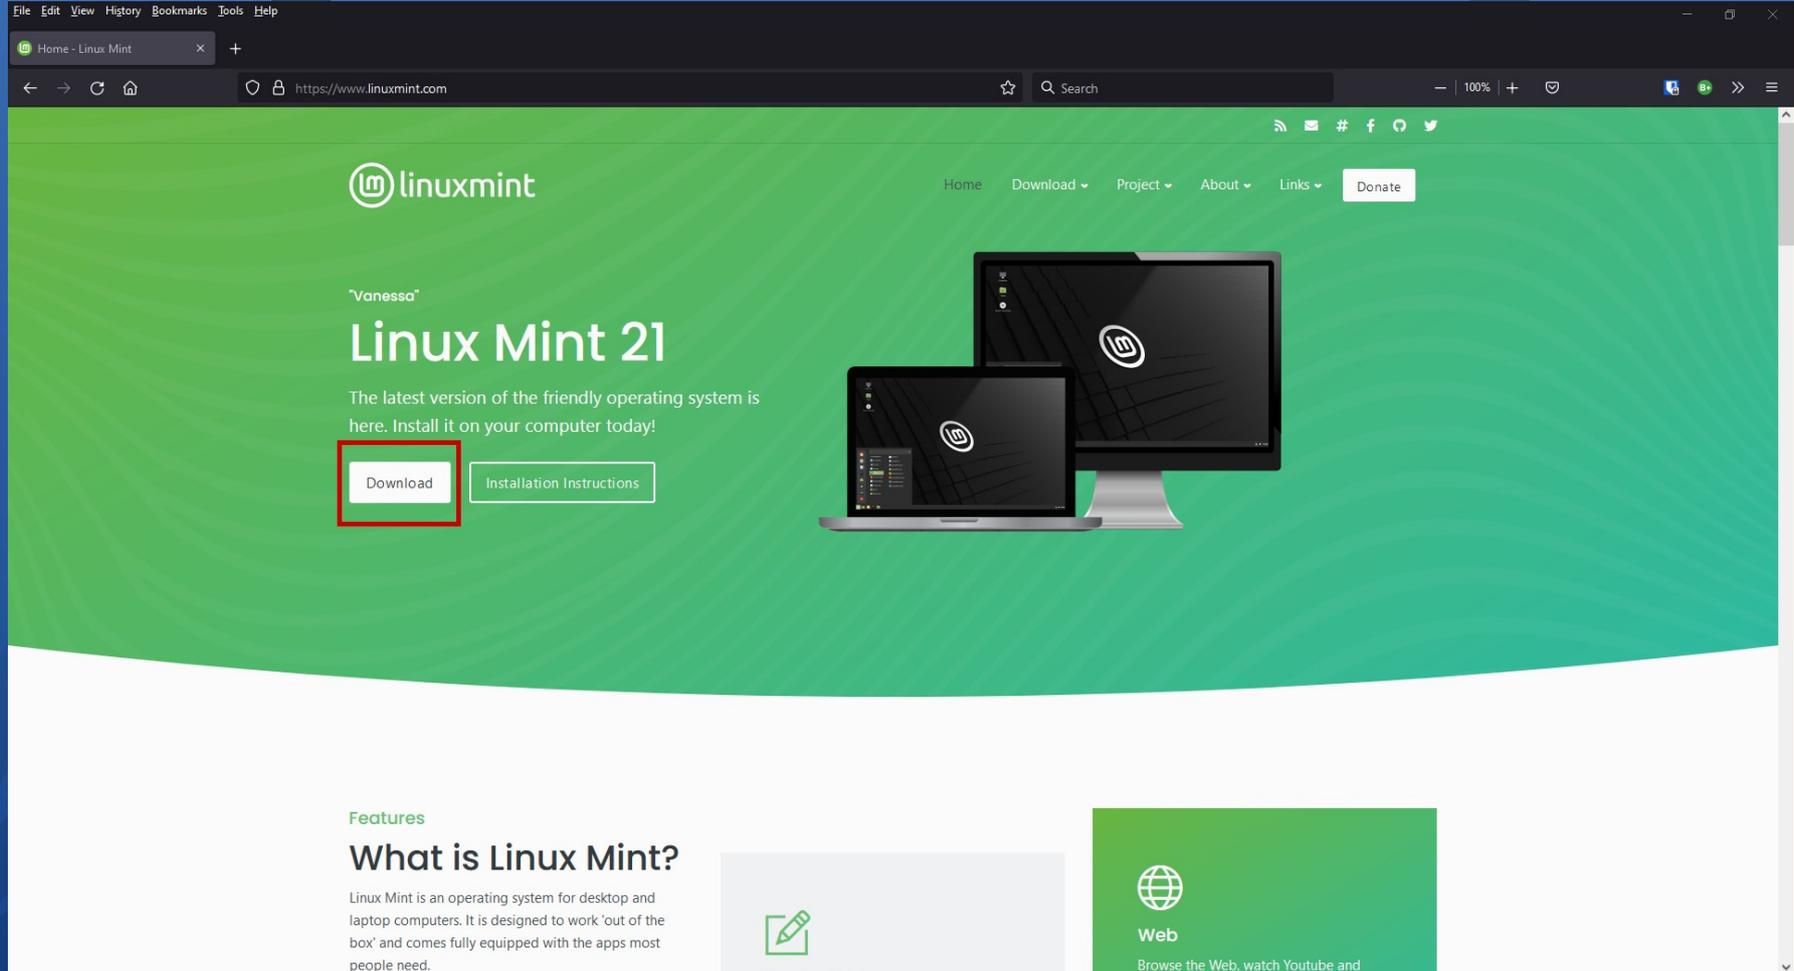

Why Bootable?

- You can run an operating system, like Linux, off the thumb drive
- You do not make any changes to your hard drive or your operating system
- You can access all your files and open them up in the “live” thumb drive, edit the file, and you can save it back to your own hard drive

LINUX ISO

Getting Linux Mint

https://linuxmint.com/

The screenshot shows a web browser window displaying the Linux Mint homepage. The browser's address bar shows the URL `https://www.linuxmint.com`. The website has a green header with the Linux Mint logo and navigation links: Home, Download, Project, About, Links, and a Donate button. The main content area features the text "Vanessa" and "Linux Mint 21", followed by the message "The latest version of the friendly operating system is here. Install it on your computer today!". Below this message are two buttons: "Download" (highlighted with a red box) and "Installation Instructions". To the right of the text is an image of a laptop and a monitor, both displaying the Linux Mint desktop environment. Below the main content, there is a section titled "Features" with the heading "What is Linux Mint?". The text under this heading reads: "Linux Mint is an operating system for desktop and laptop computers. It is designed to work 'out of the box' and comes fully equipped with the apps most people need." To the right of this text is a green box with a globe icon and the text "Web" and "Browse the Web, watch Youtube and".

Features

What is Linux Mint?

Linux Mint is an operating system for desktop and laptop computers. It is designed to work 'out of the box' and comes fully equipped with the apps most people need.

Web

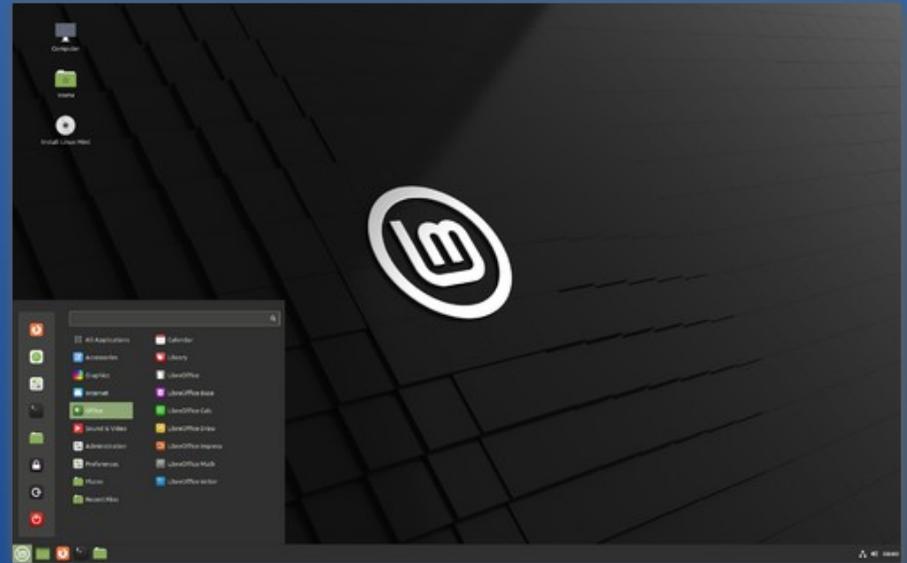

Browse the Web, watch Youtube and

<https://linuxmint.com/>

- When you click on the Download button, you are taken to another page where you have to choose which of three versions of Mint you want to download

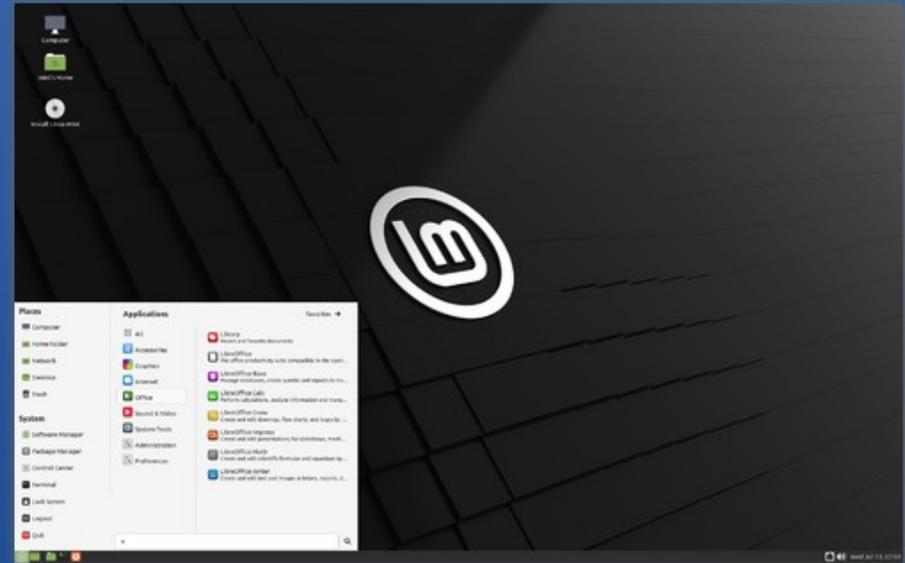

MINT WEBSITE

- The most popular version of Linux Mint is the Cinnamon edition. Cinnamon is primarily developed for and by Linux Mint. It is slick, beautiful, and full of new features.

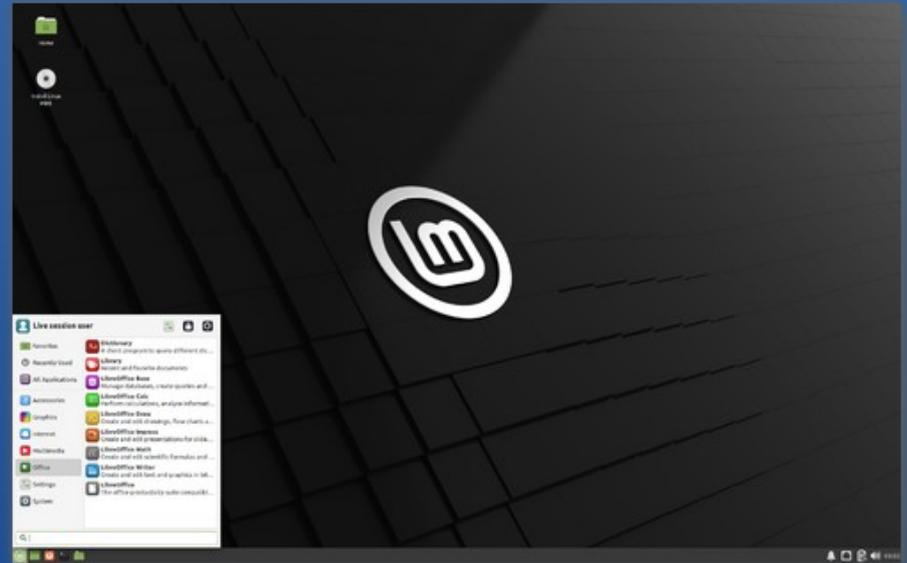

MINT WEBSITE

- Linux Mint is also involved in the development of MATE, a classic desktop environment. Although it misses a few features and its development is slower than Cinnamon's, MATE runs faster, uses fewer resources and is more stable than Cinnamon.

MINT WEBSITE

- Xfce is a lightweight desktop environment. It doesn't support as many features as Cinnamon or MATE, but it's extremely stable and very light on resource usage.

MINT WEBSITE

- <https://linuxmint.com/>
- Choose your version, we're getting Cinnamon
- Choose your location, we're getting it from Purdue Linux User Group, because it's somewhat close to me
- Can be left in Downloads or moved to another folder (I have a folder for ISO)

Bootable Thumb Drives

Getting and Using Etcher

balenaEtcher

- Sometimes just called Etcher
<https://www.balena.io/etcher/>
- balenaEtcher is a free and open-source utility used for writing image files such as .iso and .img files onto storage media to create live SD cards and USB flash drives

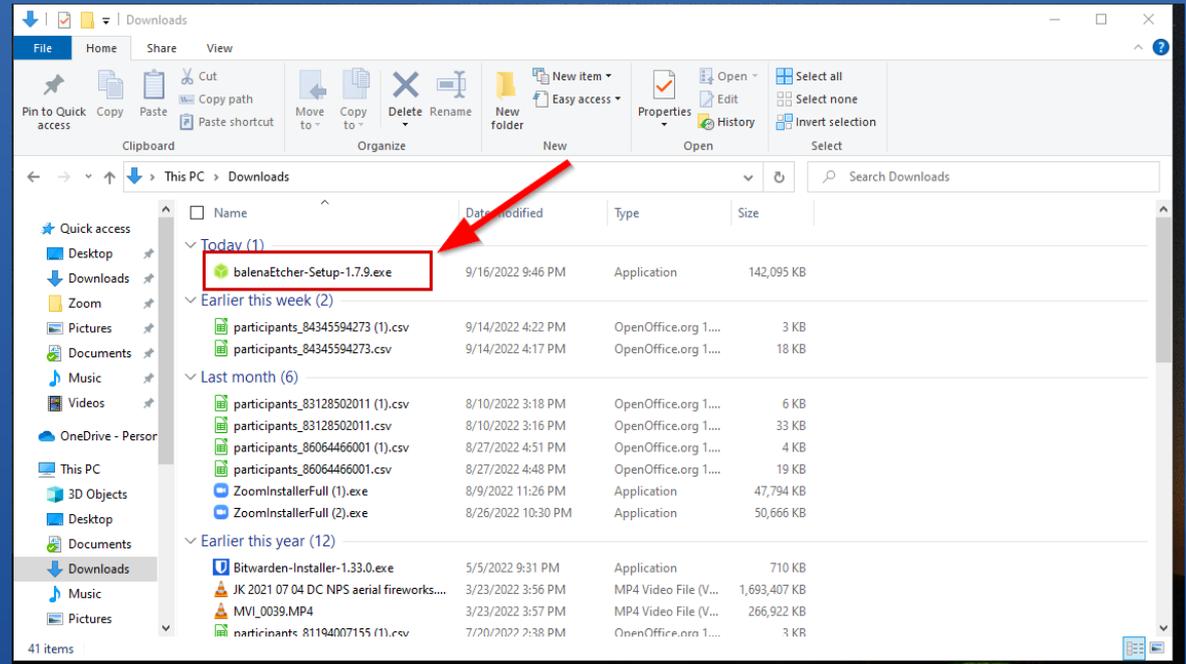

GETTING ETCHER

- <https://www.balena.io/etcher/>
- Use browser of choice
- Website knows what version of Etcher you need

<https://www.balena.io/etcher/>

- Download
- Double-click to start the install process

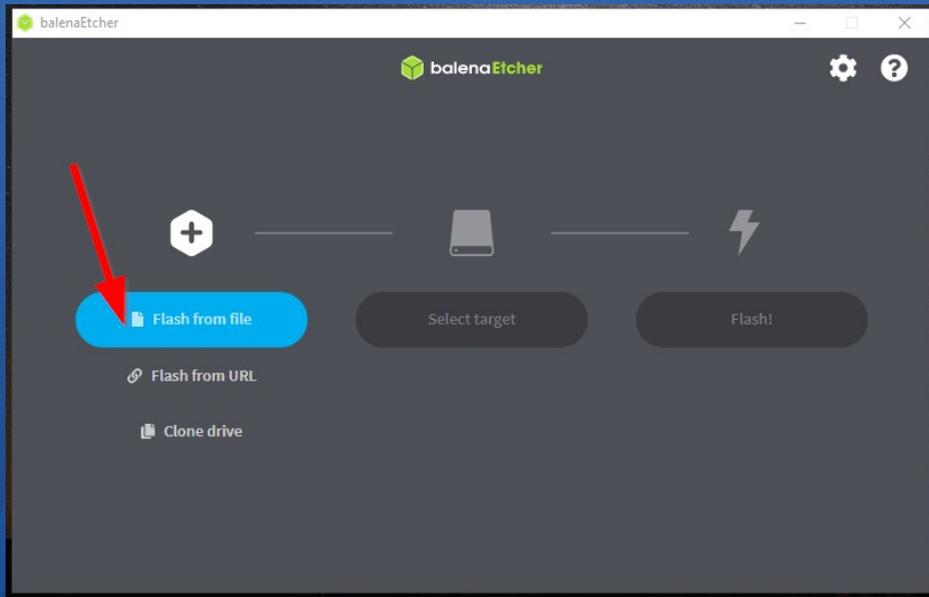

CREATING A LIVE USB

- Connect blank 16 GB (or larger) USB to your computer
- Go to Downloads (or wherever you moved Etcher if you did)
- Double click Etcher to install (or if already installed, go to Start Menu to run it)

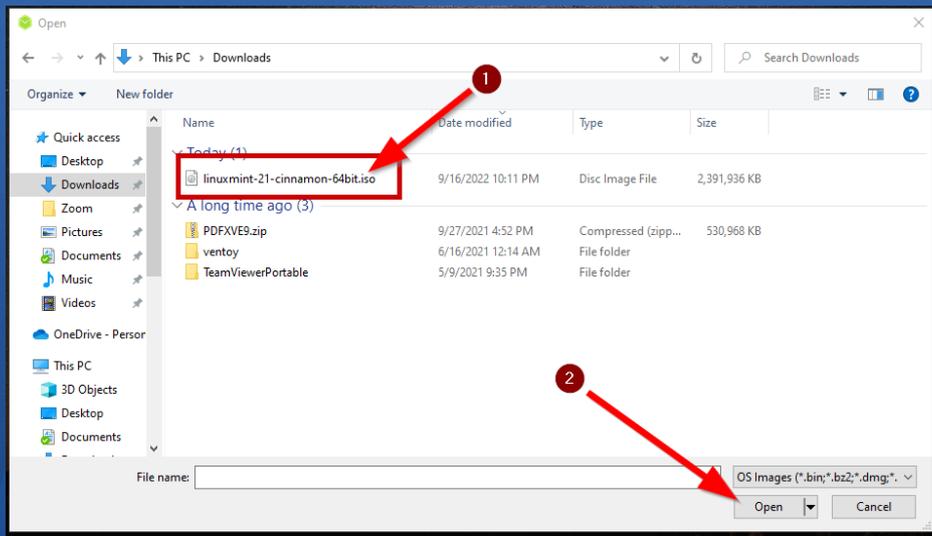

CREATING A LIVE USB

- Select “Flash from File”

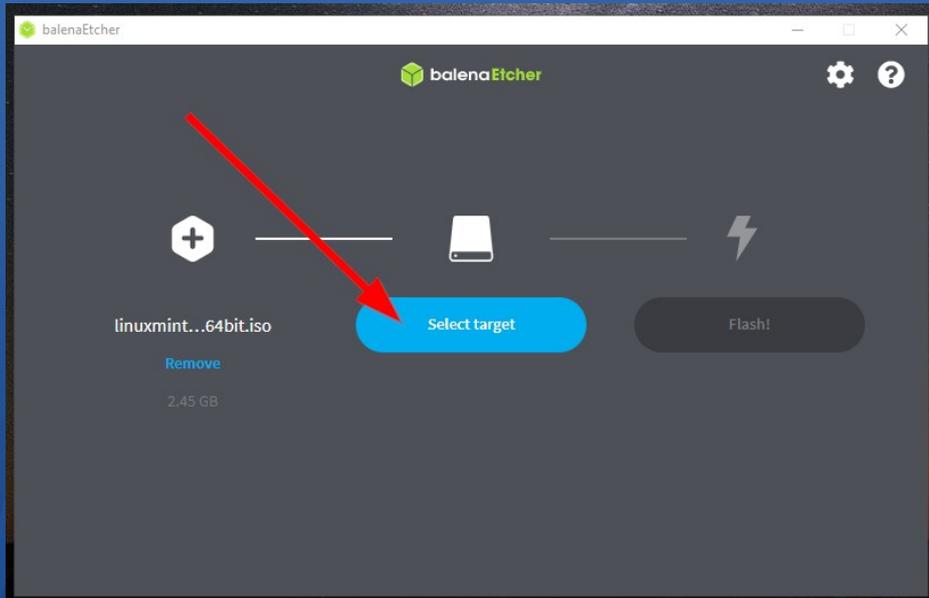

CREATING A LIVE USB

- and find the ISO of Mint (or whatever distro you chose), click “Open”

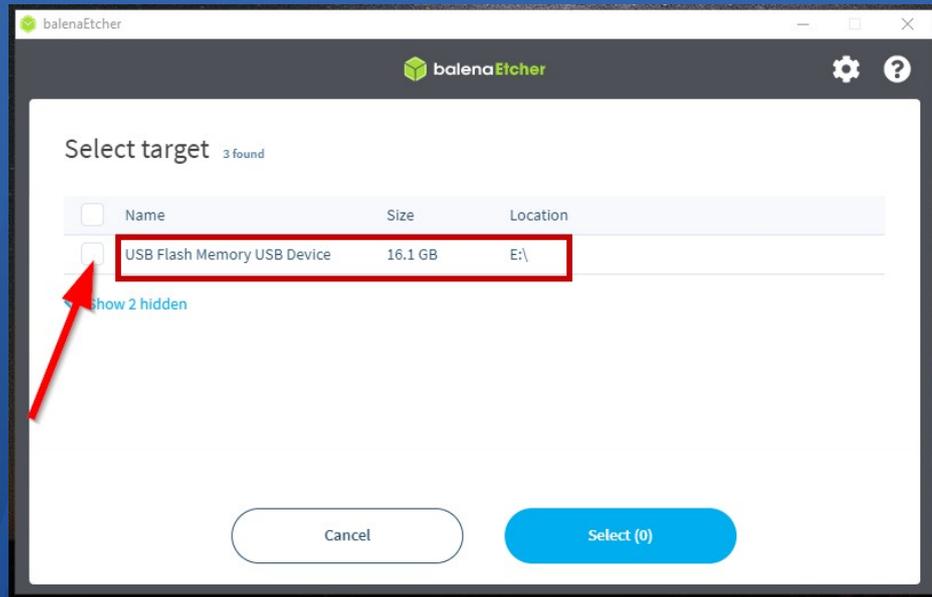

CREATING A LIVE USB

- Select “Select Target”

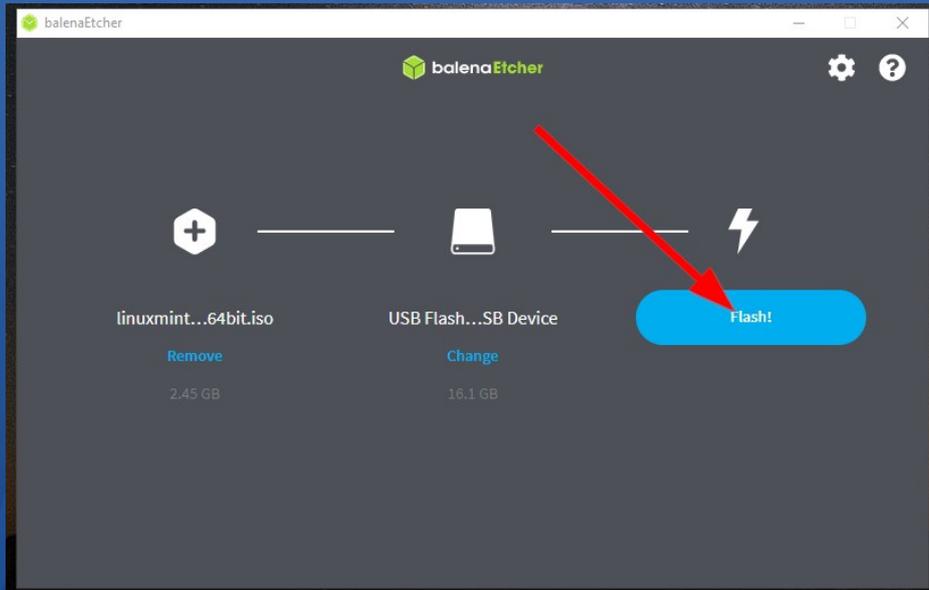

CREATING A LIVE USB

- choose the USB that you want to use, make sure it's the right one, check the box and click "Select"

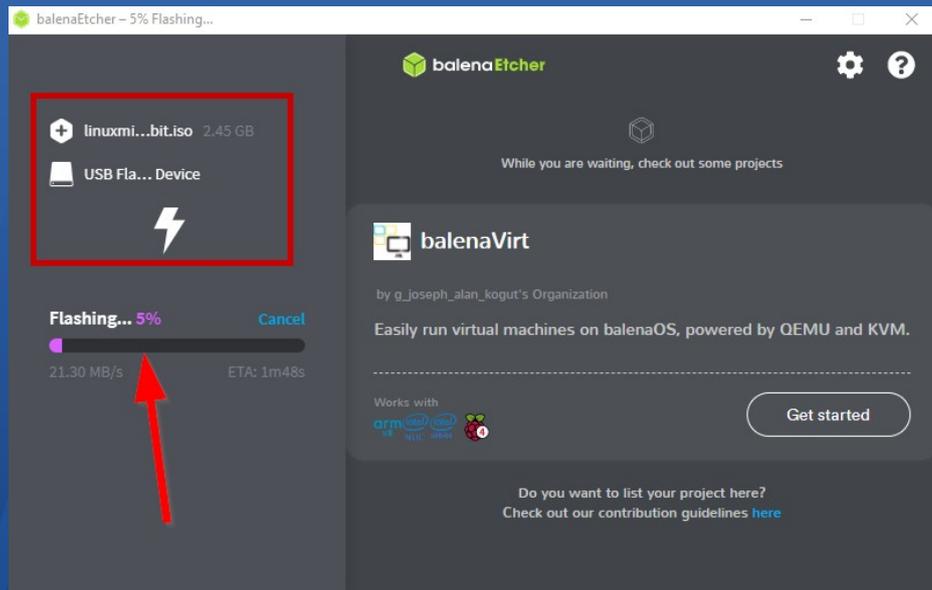

CREATING A LIVE USB

- If something isn't right, you can go back to change it. Double check.
- Last step, choose to "Flash!"

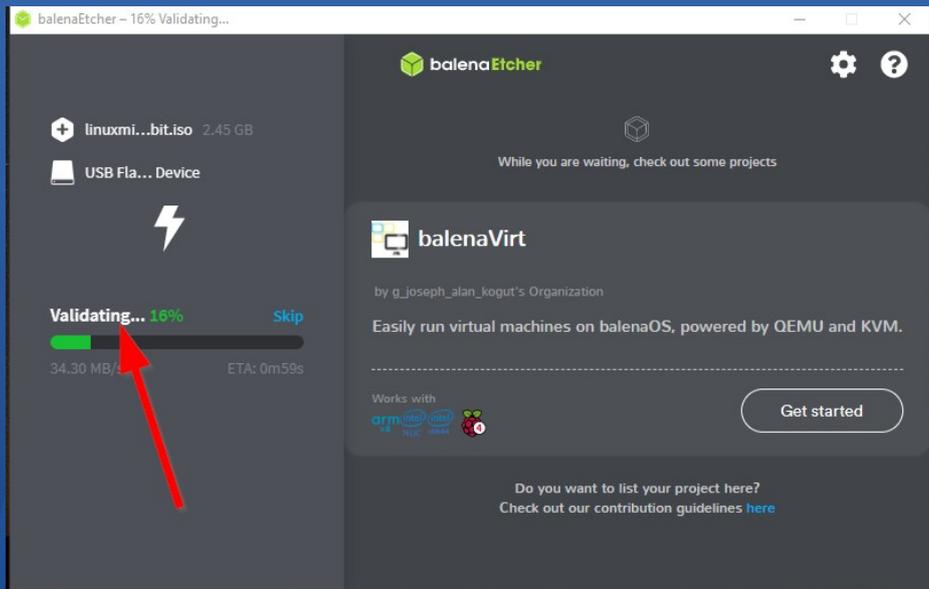

CREATING A LIVE USB

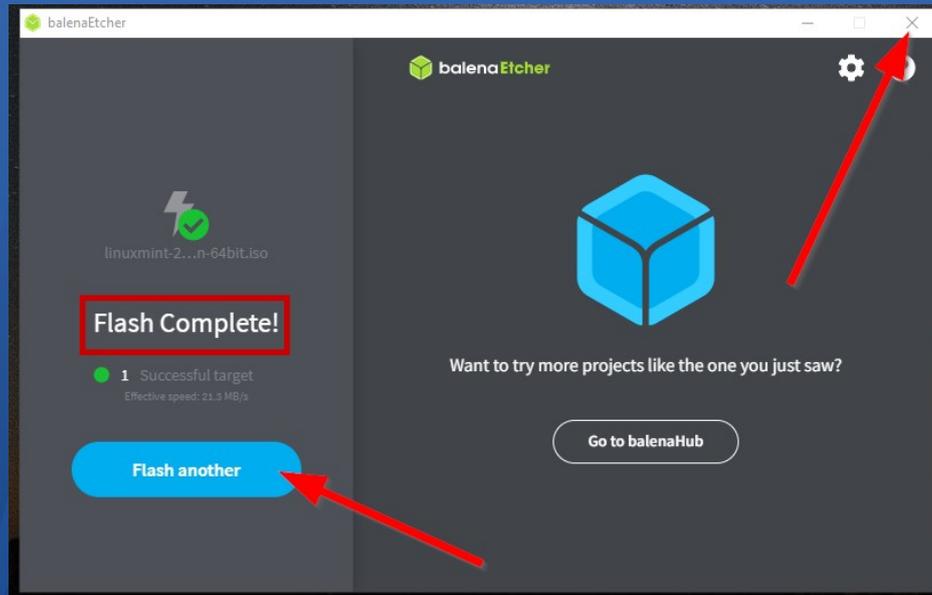

- Etcher will “flash” the USB drive putting the Mint IOS on the drive and making it “bootable”

CREATING A LIVE USB

- After flashing, Etcher will “Validate” the flash process

CREATING A LIVE USB

- When finished, you can either flash another USB drive or EXIT

BOOTING TO A USB Drive

- We now turn the workshop over to Cal, where he will share with us “How to Boot to a USB Drive” on your computer (without making any changes to your computer)
- Then Cal will take you on a tour of the Mint operating system that’s running off the USB drive and not your computer’s hard drive
