How to Disable the Password Option in Windows 11

This procedure is just for a local account, not a Microsoft account.

1. Press the Windows key + R at the same time.
2. Enter netplwiz in the Run window search box field.
3. The User Accounts window will open. Select the account you want to use to automatically log in.
4. Check the option that indicates Users must enter a user name and password to use this computer.
5. Click the OK button.
6. Enter your password once, then again to confirm it.
7. Click the OK button.

Restart your computer and the login screen password lock will now be skipped and directly opens the desktop.

How to Enable the Password Option in Windows 11

1. Press the Windows key + R at the same time.
2. Enter netplwiz in the Run window search box field.
3. The User Accounts window will open. Select the account you want to disable the password option.
4. Uncheck the option that indicates Users must enter a user name and password to use this computer.
5. Click the OK button.

Restart your computer and the login screen password lock will appear.
